

Pundit is a suite of tools for annotating the web.

With our annotator, you can highlight, comment and add tags on any page and pdf document found on the web as well as create semantic relations between text fragments, web resources and linked data entities. All your data can be accessed, searched, queried and exported in several standard formats, being thus fully open to further reuse.

An open source software maintained by **Net7**
www.netseven.it

A component of the **MURUCA** framework
www.muruca.org

Used in **TRIPLE**

HIGHLIGHT AND COMMENT

Highlight, comment and add tags on text fragments of any web page, Digital Library or Archive.

PDF ANNOTATION

Add your annotations on the PDF documents you find on the web.

SEMANTIC ANNOTATION

Select a portion of text and use it as the subject of the triple. Then choose an appropriate predicate and object.

CUSTOM PREDICATES

The list of supported predicates can be customized to your needs.

PUNDIT DASHBOARD

A unique application where you can review and manage all your annotations.

SOCIAL ANNOTATION

You can interact with other users directly on annotations: put a like or a dislike, report an annotation or reply to it.

ANNOTATIONS EXPORT

Your web annotations can be exported in many formats, including DOCX, XLSX, ODT and JSON-LD. This feature enables you to share and reuse your work.

STANDARD DATA MODEL

Pundit data model is based on the guidelines of the W3C Web Annotation Working Group.
